

Emergency lighting for challenging environments

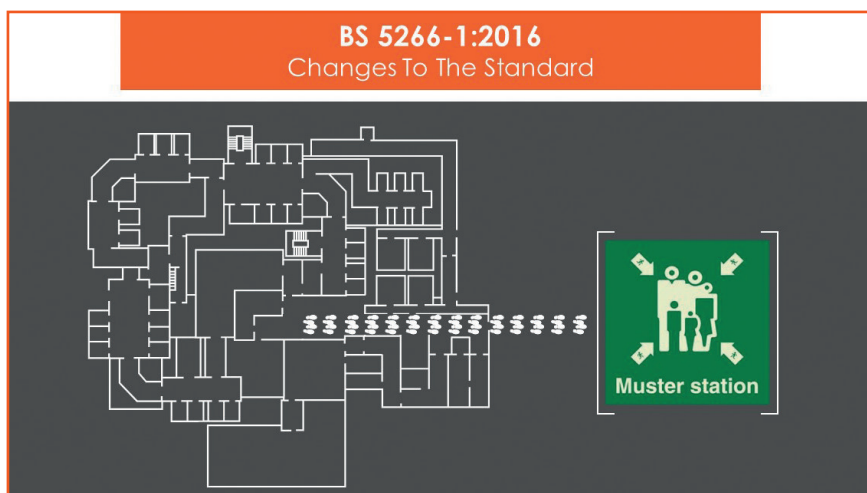

Our CIBSE accredited CPD looks at why we need emergency lighting and who is responsible for ensuring compliance. You will receive two hours of your CIBSE CPD requirements for attending.

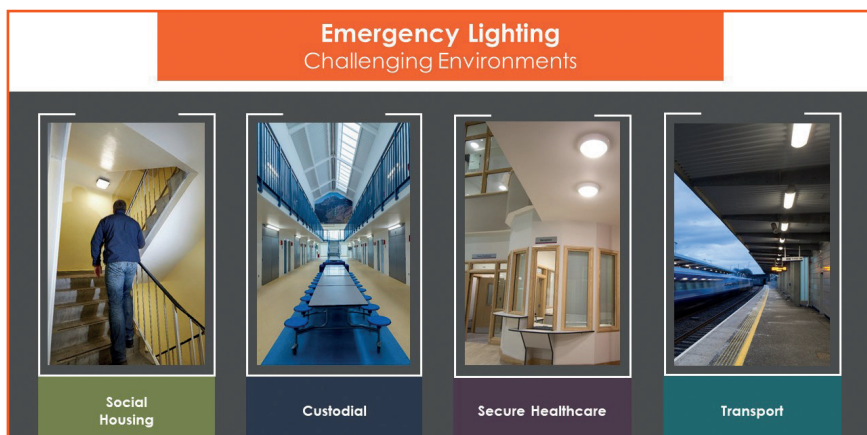

We examine specifics including typical applications, system definitions and exit sign requirements.

Together we will discuss the pros and cons of different system types.

We discuss the changes to BS 5266-1:2016 looking at "stay put lighting" and the importance of effectively illuminating the muster station.

Best practice tips will be provided regarding battery management and lighting design.

The CPD concludes with case studies focusing on emergency lighting specified in challenging environments.

To arrange this CPD, either at your premises or at our factory in Sutton, Surrey please contact Claire McCarthy at claire.mccarthy@designplan.co.uk or **020 8254 2023**.
