

Robust Lighting CPD

Our CIBSE accredited Robust Lighting CPD identifies those factors affecting durable lighting for a range of market sector applications.

This CPD looks at how challenging environments are illuminated. We examine vandal resistance, adverse weather conditions, ease of maintenance and through life costs. Product standards are discussed including the IK (EN 62262) and IP (EN 60529) ratings.

We explain the manufacturing processes used to ensure luminaire durability and analyse the light source, dispelling the myths surrounding the use of LEDs.

Issues impacting the illumination of transport, social housing, custodial, secure healthcare and urban exterior applications are identified and discussed. This includes market specific standards, the requirement for robust anti-ligature luminaires, reducing the cost of ownership (using less energy and reducing maintenance call outs) and ensuring technology upgrades are sustainable.

You will receive two hours of your CIBSE CPD requirements for attending.

To arrange our Robust Lighting seminar, either at your premises or at our factory in Sutton, Surrey please contact Claire Quin Elmes at claire@designplan.co.uk or **020 8254 2023**.
